

Teams & Enterprise

Dashboard

The dashboard lets you access billing, set up usage-based pricing, and manage your Team.

Overview

Get a quick summary of your team's activity, usage statistics, and recent changes. The overview page provides at-a-glance insights into your workspace.

Settings

The screenshot shows the Cursor Settings page for a team named 'Eric Zakariasson'. The page displays various settings, including Privacy Settings, Usage-Based Pricing Settings, and Bedrock IAM Role.

Privacy Settings

Share Data: **Active**

Setting applies to all team members. This setting is enforced by your team.

✓ Data Sharing: Enabled

✓ OpenAI: Zero Data Retention

✓ Anthropic: Zero Data Retention

✓ Google Vertex AI: Zero Data Retention

✓ xAI Grok: Zero Data Retention

Data sharing is enabled for all users on the team, meaning that code data is shared to help improve Cursor. See our [privacy policy](#) for more information.

Usage-Based Pricing Settings

Enable usage-based pricing: ☒

Only admins can modify usage-based pricing settings: ☐

Monthly team spending limit:

Per-user monthly limit (optional):

Bedrock IAM Role

Configure team-wide preferences and security settings. The settings page includes:

Teams & Enterprise Settings

Privacy Settings	▼
Usage-Based Pricing Settings	▼
Team Marketplaces	▼
Bedrock IAM Role	▼
Single Sign-On (SSO)	▼
Cursor Admin API Keys	▼
Active Sessions	▼
Invite Code Management	▼
API Endpoints	▼

Enterprise-Only Settings

 **Device-level enforcement:** In addition to dashboard settings, enterprises can enforce policies like allowed team IDs and allowed extensions on user devices through MDM. See [Identity and Access Management](#) and [Deployment Patterns](#) for details.

Model Access Control	▼
Enhanced Spend Limits	▼
Auto Run Configuration	▼
Repository Blocklist	▼
MCP Configuration	▼
Cursor Ignore Configuration	▼
.cursor Directory Protection	▼
AI Code Tracking API	▼
Audit Log	▼

 SCIM (System for Cross-domain Identity Management) provisioning is also available for [Enterprise](#) plans. See our [SCIM documentation](#) for setup instructions.

Members

Manage your team members, invite new users, and control access permissions. Set role-based permissions and monitor member activity.

Integrations

GitHub

Connect GitHub for Background Agents, Bugbot and enhanced codebase context.

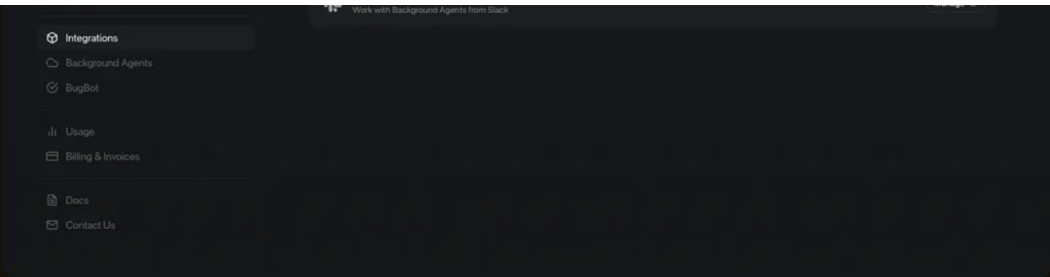

Connected as: ericzakariasson to repositories in GitHub organizations: Juan-HMR, cursor, ericzakariasson, pendlabs

Manage 

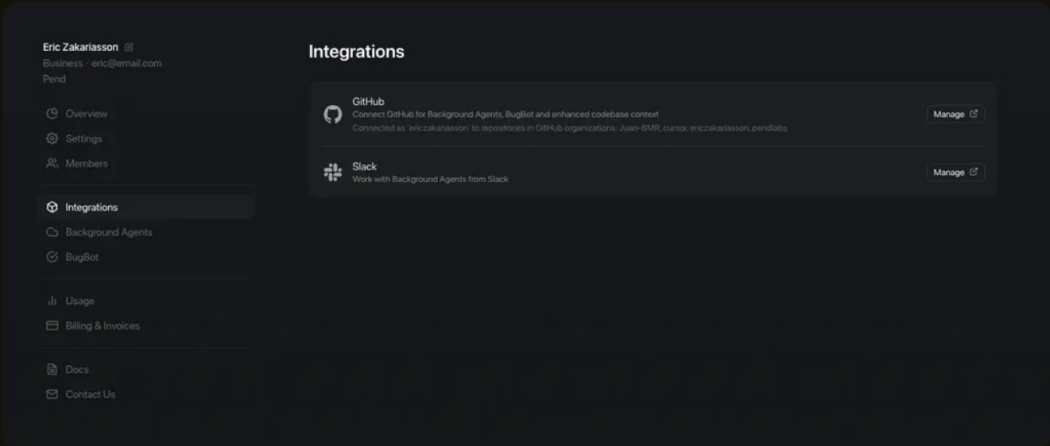

Slack

Manage 

Connect Cursor with your favorite tools and services. Configure integrations with version control systems, project management tools, and other developer services.

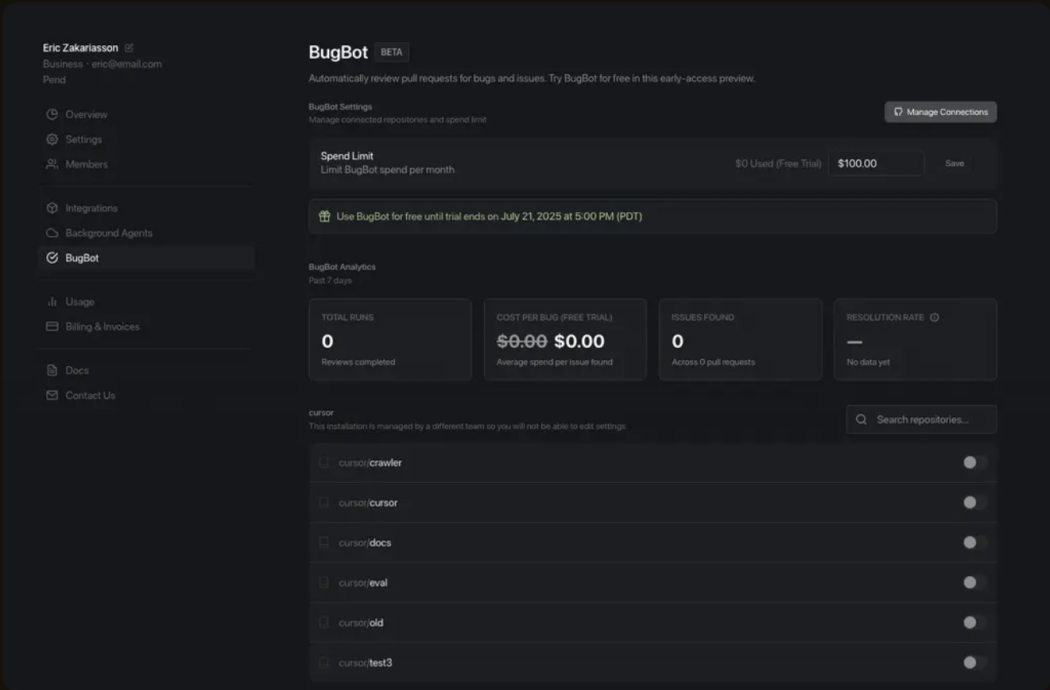

Cloud Agents

Monitor and manage cloud agents running in your workspace. View agent status, logs, and resource usage.

Bugbot

Access automated bug detection and fixing capabilities. Bugbot helps identify and resolve common issues in your codebase automatically.

Active Directory Management

For enterprise teams, manage user authentication and access through Active Directory integration. Configure SSO and user provisioning.

Usage

Track detailed usage metrics including AI requests, model usage, and resource consumption. Monitor usage across team members and projects.
