

Teams & Enterprise

Enterprise

Cursor provides enterprise-grade security, compliance, and administrative controls for organizations deploying AI-assisted development at scale.

Security and compliance resources

For security reviews and compliance assessments, start with these resources:

- [Trust Center](#) - Security practices, certifications, and compliance information
- [Security page](#) - Detailed security architecture and controls
- [Privacy Overview](#) - Data handling and privacy guarantees
- [Data Processing Agreement](#) - GDPR-compliant DPA with data protection commitments

Our certifications include SOC2 Type II, and we maintain GDPR compliance. Visit the [Trust Center](#) for the latest certification documents and third-party assessment reports.

Enterprise documentation

Learn how to deploy, configure, and manage Cursor for your organization. This documentation covers:

- [Identity & access](#) - SSO, SCIM, RBAC, and MDM policies
- [Privacy & data governance](#) - Data flows, Privacy Mode, and data residency
- [Network configuration](#) - Proxy setup, IP allowlisting, and encryption
- [LLM safety & controls](#) - Hooks, terminal sandboxing, and agent controls
- [Models & integrations](#) - Model controls, MCP, and third-party integrations
- [Spend Limits](#) - Configure spending limits to control costs
- [Compliance & monitoring](#) - Audit logs and tracking
- [HIPAA Business Associate Agreements](#) - Request BAA support for Enterprise customers
- [Deployment patterns](#) - MDM-managed editor vs self-hosted CLI

Key features

Identity and access

- [SSO and SAML](#) - Single sign-on for streamlined authentication
- [SCIM](#) - Automated user provisioning and deprovisioning
- [MDM policies](#) - Enforce allowed team IDs and extensions on user devices

Privacy and security

- [Privacy Mode](#) - Zero data retention with AI providers
- [Agent Security](#) - Guardrails for agent tool execution
- [Hooks](#) - Custom security and compliance workflows

Administrative controls

- [Dashboard](#) - Team management, settings, and monitoring
- [Admin API](#) - Programmatic access to admin features
- [Analytics](#) - Usage metrics and insights

- [Conversation Insights](#) - Understand the type of work being done with Cursor (Enterprise only)
- [AI Code Tracking API](#) - Per-commit AI usage metrics (Enterprise only)
- [Cursor Blame](#) - AI-aware git blame that shows AI vs human code attribution (Enterprise only)
- [Analytics API](#) - Usage metrics and insights
- [Billing Groups](#) - Manage spend across groups of users for reporting and chargebacks (Enterprise only)
- [Service Accounts](#) - Non-human accounts for automated workflows (Enterprise only)

Models and integrations

- [Models](#) - Available models and configuration
- [MCP](#) - Model Context Protocol server trust management
- [Slack](#) - Cloud Agents in Slack
- [GitHub](#) - Repository integration
- [Linear](#) - Issue tracking integration
- [Bugbot](#) - Automated bug detection and fixing

Monitoring and compliance

- [Audit logs](#) - Track authentication, user management, and administrative actions (Enterprise only)
- [SIEM integration](#) - Stream audit logs to your security tools
- [HIPAA Business Associate Agreements](#) - BAA support for Enterprise customers

Getting started

1. Review the [Trust Center](#) and [Security page](#) for your security assessment
2. Read through the [enterprise documentation](#) to understand deployment options
3. Set up [SSO](#) and [SCIM](#) for user management
4. Deploy Cursor and configure [MDM](#) policies to enforce team IDs and extensions
5. Review the [Dashboard](#) to monitor team usage

Plan Comparison

Team Admin & Billing

Capability	Individual Plans	Teams	Enterprise
Centralized Billing		✓	✓
Usage Spend Controls	Personal limits	Team limits	Pooled usage + admin-only controls
Billing Groups			✓
Team Usage Analytics		Analytics Dashboard	Analytics Dashboard , AI Code Tracking API , Conversation Insights
Cursor Blame			✓
SSO (SAML/OIDC)		✓	✓
SCIM Provisioning			✓
Audit Logs			✓
Service Accounts			✓

Marketplace

Capability	Individual Plans	Teams	Enterprise
Team marketplaces		1 team marketplace	Unlimited team marketplaces
Community plugin import		On by default	Off by default
Marketplace edits		All teams can edit	Only admin edits
SCIM distribution & access gating		No SCIM access gating	Scope distribution and gate access via SCIM (control who sees which marketplace based on identity provider groups)

Centralized Agent Controls

Capability	Individual Plans	Teams	Enterprise
Privacy Mode	User choice	Enforce org-wide	Enforce org-wide
Team Rules		Enforceable + Optional	Enforceable + Optional
Hooks for Logging, Auditing, and more	✓	MDM Distribution	MDM & Server-side distribution
Agent Sandbox Mode	✓	✓	Enforce org-wide
Repository Blocklist			✓
Model Access Restrictions			✓
Auto-run, Browser, and Network Controls			✓

User Access Controls

Capability	Individual & Teams Plans	Enterprise
Cursor CLI		Restrict which users can access agents via CLI
Cloud Agents		Restrict which users can create Cloud Agents
Analytics		Restrict analytics dashboard to admins only
BYOK		Disable users from using their own API keys

Support & Legal

Capability	Individual Plans	Teams	Enterprise
Technical Support	Community & Standard Support	Community & Standard Support	First human response times: 8 hours (critical), 24 hours (standard)
Terms	Online Terms	MSA & DPA	MSA & DPA

For security vulnerabilities, see our [responsible disclosure program](#).
