

Integrations

GitLab

The GitLab integration connects your repositories so you can use features like [Cloud Agents](#) and [Bugbot](#).

Setup

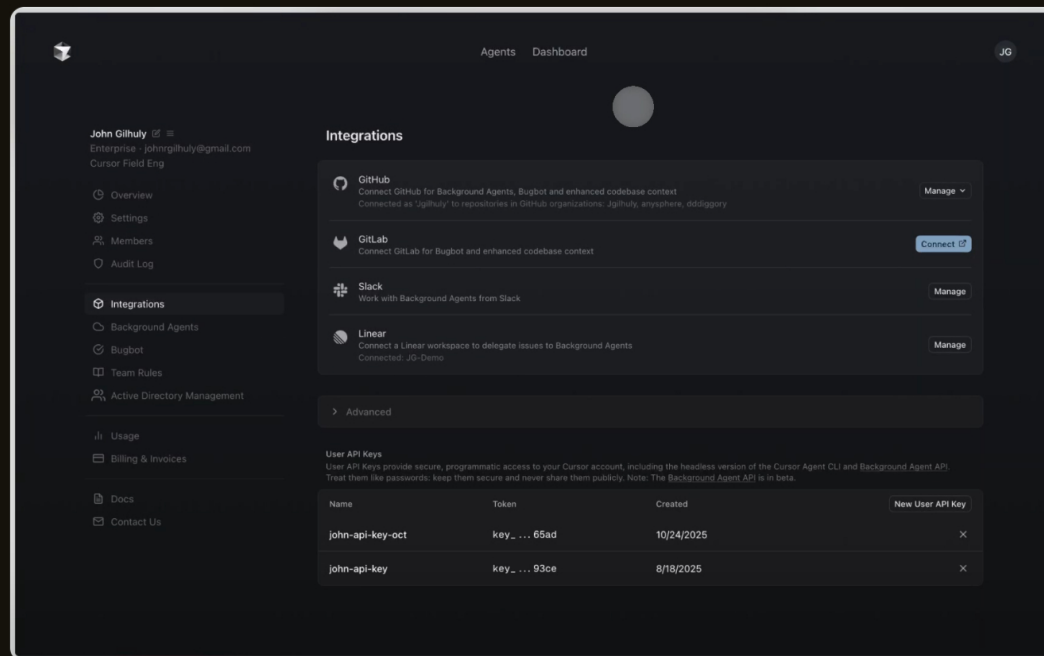

[GitLab.com](#)[GitLab Self-Hosted](#)

Requires Cursor admin access and GitLab maintainer access.

GitLab integration requires a **paid GitLab plan** (Premium or Ultimate). Project access tokens, which are required for this integration, are not available on GitLab Free.

1. Go to [Integrations](#) in the dashboard
2. Click **Connect** next to GitLab (or **Manage Connections** if already connected)
3. Follow the GitLab installation flow
4. Back on the Integrations tab, click **Manage** next to your GitLab connection and select **Sync Repos**
5. Return to the dashboard to configure features on your repositories

To disconnect your GitLab account, return to the integrations dashboard and click **Disconnect Account**.

Advanced networking

Self-hosted instances support multiple connection methods beyond IP whitelisting.

[PrivateLink \(AWS\) or Private Service Connect \(GCP\)](#)[Reverse Proxy Tunnel](#)

Next steps

Once your GitLab integration is connected, configure the features that use it:

- [Bugbot](#) — automated PR reviews that catch bugs and security issues
- [Cloud Agents](#) — AI agents that run in the cloud on your repositories
