Hide models

Premium routing

Premium allows Cursor to select the most capable models for you, recommended for the most complex tasks. The Cursor team selects Premium models based on internal benchmarks, evaluations, and user feedback.

Premium pricing is based on the selected model's API rate. Check your [usage page](#) to see cost and model selection at the request level.

Plans

All individual plans include unlimited tab completions, extended agent usage limits on all models, access to Bugbot, and access to Cloud Agents.

Plan	Price	API usage included	Auto + Composer
Pro	\$20/mo	\$20	Generous included usage
Pro Plus	\$60/mo	\$70	Generous included usage
Ultra	\$200/mo	\$400	Generous included usage

Since different models have different API costs, your model selection affects how quickly your included usage is consumed.

How much usage do I need?

- **Daily Tab users:** Always stay within \$20
- **Limited Agent users:** Often stay within the included \$20
- **Daily Agent users:** Typically \$60–\$100/mo total usage
- **Power users (multiple agents/automation):** Often \$200+/mo total usage

What happens when I reach my limit?

When you exceed your included monthly usage, you can either:

- **Add on-demand usage:** Continue at the same API rates with pay-as-you-go billing
- **Upgrade your plan:** Move to a higher tier for more included usage

On-demand usage is billed monthly at the same rates. Requests are never downgraded in quality or speed.

Teams

There are two teams plans: Teams (\$40/user/mo) and Enterprise (Custom).

Team plans provide additional features like privacy mode enforcement, admin dashboard with usage stats, centralized team billing, and SAML/OIDC SSO.

We recommend Teams for any customer that is happy self-serving. We recommend [Enterprise](#) for customers that need priority support, pooled usage, invoicing, SCIM, or advanced security controls.

Learn more about [Teams pricing](#).

Cursor Token Rate

On Teams plans, non-Auto agent requests include a Cursor Token Rate of \$0.25 per million tokens. This rate applies on top of model API pricing for included usage, on-demand usage, and BYOK usage. Auto is exempt from the Cursor Token Rate.

Max Mode

Max Mode extends the context window to the maximum a model supports. More context gives models deeper understanding of your codebase, leading to better results on complex tasks. The models table above shows each model's maximum context size.

Max Mode uses token-based pricing at the model's API rate, so it consumes usage faster than the default context window. On current individual plans, Max Mode is billed at the model's API rate. On Teams plans, non-Auto requests include the Cursor Token Rate. On legacy request-based plans, Max Mode adds a 20% surcharge.

FAQ

- Where are models hosted?
