

Models

GPT-5.5

Model ID gpt-5.5	Context window 272k	Max context 1M	Provider OpenAI
Capabilities ∞ 🧠 📄	Speed Medium	Cost Medium	Intelligence Frontier

GPT-5.5 is OpenAI's most intelligent model in Cursor. It keeps momentum on long-running work and stays on task for significantly longer before stopping early, which matters most in complex, multi-step coding sessions.

Strengths

- Highest overall intelligence in the GPT-5 family for challenging coding and reasoning tasks.
- More persistent on long-running work; it keeps digging instead of ending early when tasks are still incomplete.
- Strong at maintaining context and execution quality across larger, multi-step workflows.
- More token-efficient than GPT-5.4 on complex, long-running tasks, which helps reduce total token usage for the same outcomes.

Limitations

- Higher per-token pricing than GPT-5.3 Codex.
- Throughput can be lower on straightforward tasks where smaller models are already enough.

Tools

GPT-5.5 has access to all agent tools when used with Cursor including:

📁 Semantic search	▼
🔍 Search files and folders	▼
🌐 Web	▼
📄 Read files	▼
✏ Edit files	▼
>_ Run shell commands	▼
🌐 Browser	▼
🖼 Image generation	▼
💬 Ask questions	▼

Pricing

Cursor plans include two usage pools. GPT-5.5 draws from the **API** pool, which charges at the rates below. Individual plans include at least \$20 of API usage each month (more on higher tiers). All prices are per million tokens.

Name ^	Input	Cache Write	Cache Read	Output
 GPT-5.5 	\$5	-	\$0.5	\$30
 GPT-5.5 (Fast Mode) 	\$12.5	-	\$1.25	\$75
 GPT-5.5 (Long Context (>272k)) 	\$10	-	\$1	\$45

A **Fast mode** tier (`gpt-5.5-fast`) is available for priority processing. It has higher per-token pricing than standard mode.

GPT-5.5 uses the same cache discount, regional endpoint pricing, and long-context pricing behavior as GPT-5.4. When input exceeds 272k tokens (long context / Max Mode), input pricing doubles and output pricing is 1.5x the standard rate.
